PROFILE

Strategic Product Owner and AI-Native Builder with 6+ years of experience in hypergrowth SaaS (CSR and travel tech). I specialise in transforming complex workflows—both internal and user-facing—into seamless experiences by integrating LLMs, Claude Code, and intelligent automations. Proven track record of reducing manual work while driving product strategy through data-driven discovery and cross-functional execution.

KEY ACHIEVEMENTS

End-to-End Workflow Automation

Led the automation of one of Benevity's core user workflows: mapped every touchpoint, defined the data-field mapping to consolidate data scattered across Slack, ClickUp, and Salesforce into a central database, and rolled out API integrations and low-code automations in phases. **Cut manual workload by 70%** and removed friction for **5,000+ users**.

AI Knowledge Chatbot

Led the product decisions behind an internal AI chatbot — source scoping, response and citation behaviour, and retrieval-time access policy — **cutting time spent on tickets by 30%**.

AI Image-Recognition Feature

Shipped an **AI image-recognition feature** that replaced manual data entry with automated extraction, removing a key source of user friction; wrote the technical specs for its validation logic.

User Engagement & Onboarding

Sustained a 10% lift in user engagement over two years through onboarding redesigns and iterative UX improvements.

PROFESSIONAL EXPERIENCE

Benevity Inc. — Product Owner

Oct 2022 – Present

CSR & engagement tech · B2B2C SaaS · Canada · Remote

- Led an end-to-end automation of one of the core user workflows: mapped every touchpoint, defined the data-field mapping to consolidate data from Slack, ClickUp, and Salesforce into a central database, and rolled out API integrations and low-code automations in phases — **cutting manual workload by 70%** (40% at first release, rising with later iterations), turning 5-minute tickets into sub-minute or automated actions, and freeing ~15 support and CS staff for higher-value work.
- Shipped an **AI image-recognition feature** that replaced manual data entry, cutting form-fill time and a key source of user friction; wrote the specs for its validation logic.
- Owned the product side of an internal AI knowledge chatbot — scoping which Slack, Drive, and Confluence sources to index, defining response and citation behaviour, and enforcing access policy at retrieval time — **cutting time spent on tickets by 30%** and driving post-launch iteration.
- Retained ~\$200K ARR** across 30 accounts during a legacy platform sunset by surfacing hidden client configurations and running a structured Go/No-Go risk assessment.
- Sustained a 10% lift in user engagement** over two years through onboarding redesigns and iterative UX improvements.
- Consolidated 300+ user insights from NPS, support, and CSM data into Aha! to inform roadmap priorities.
- Triaged defects against enhancements with a RICE matrix to focus engineering on the highest-impact issues.
- Ran bi-weekly backlog grooming to validate estimates and keep stories build-ready, avoiding sprint bottlenecks.
- Facilitated story-mapping sessions with Design and CS in Figma, grounding delivery in real user journeys.
- Bridged CS, Product, and Engineering, turning client needs into clear technical requirements and cutting escalations.

Benevity Inc. — Customer Success Manager

Oct 2021 – Sep 2022

CSR & engagement tech · B2B2C SaaS · Canada · Remote

- Achieved 95% customer retention** through quarterly program reviews and strategic advisory for enterprise clients.
- Built Looker, Mixpanel, and Salesforce dashboards to track success metrics and trigger proactive outreach to at-risk accounts.
- Onboarded 20 enterprise clients to the platform, driving on-time activation through structured kickoff plans and milestone tracking.

Perk — Implementation Specialist

2021

Travel & Spend Management · B2B SaaS · Barcelona, Spain

- **Onboarded 20+ B2B accounts per quarter**, accelerating revenue growth with zero-downtime integrations.
- Led SSO and API integrations (Postman) as the technical contact for client IT teams, speeding time-to-value.
- Created training resources and documentation that helped clients self-serve and reduced support inquiries.

Perk — Senior Technical Support Specialist

2020

Travel & Spend Management · B2B SaaS · Barcelona, Spain

- Diagnosed complex technical edge cases and partnered with Engineering to ship fixes, improving platform stability.
- Identified user-journey friction and recommended UX improvements that raised customer satisfaction.

VOLUNTEERING

SheHub.es — Product Manager (Volunteer)

2025 – Present

Women's empowerment · Non-profit · Remote

- Launched the live public platform shehub.es: ran user research, then turned findings into user stories and requirements.
- Defined the strategy and PRD for an internal admin tool, now shipped, that automates manual community-management tasks.

SKILLS & TOOLS

Product Management: Discovery & User Interviews, User Story Mapping, Backlog Grooming, Acceptance Testing, Agile/Scrum, RICE Prioritisation, A/B Testing, OKR Tracking

AI & Automation: LLMs (ChatGPT, Gemini), Claude Code, Lovable, Figma AI, low-code automation

Data & Analytics: SQL, Looker, Mixpanel, Google Analytics, Data-Field Mapping, Excel/Sheets

Technical: Postman (API testing), SSO setups, Basic HTML, CSS, JS, Node, Python

Product Tools: Jira, Confluence, Aha!, Asana, ClickUp, Lucidchart, Miro, Figma, Productboard

CRM & Support: Salesforce, Zendesk, Intercom

Languages: Swiss German / German (native), Spanish (C1/C2), English (C1/C2)

EDUCATION & CERTIFICATIONS

Education

- Product Management — CodeOp (2023)
- Web Development — The App Brewery (2021–2022)
- Business Administration — KV Business School Lucerne (2007–2010)

Certifications

- IBM AI Product Manager Professional Certificate — IBM / Coursera (2026)
- AI Micro Certification — Product School (2025)
- AI for Product Management — Pendo.io (2024)
- Google Data Analytics Professional Certificate — Coursera (2024)
- Generative AI for Product Managers — GoPractice (2024)
- Generative AI for Everyone — DeepLearning.AI (2023)
